

Advances in Canadian Geophysics

In recognition of a new formal relationship between the Geophysical Unions of Canada and Mexico, this special session, organized by the Canadian Geophysical Union, will highlight recent and important research in Canadian Geophysics. The session will bring together researchers that span the breadth of the Canadian Geophysical Union sections, including Hydrology, Solid Earth, Biogeosciences and Geodesy. The session will include a series of invited presenters to provide an overview of the work of each of the sections, and contributed presentations by Canadian researchers and their Mexican colleagues. We encourage presentations that involve Canadian-Mexican collaborations, in recognition of the important and growing connections in the geophysical sciences between the two countries.
